Introducing The Mobile Assembly Cart From Automated Systems.

Automated Systems Mobile Assembly System is a roll around assembly line on a cart. This mobile fastening cart can be rolled up to your work station and provide an operator with three different Cleco D.C. electric hand tools. Three different torque settings, for your low, medium and high torque assembly requirements.

Take your assembly line wherever you go. Ideal for repair area assembly, backup for your main assembly line or to assemble your entire product. The Mobile Assembly System supports an unlimited number of pre-programmed applications. No need for application selector switches. No need for a socket tray.

Intuitive On-Screen Interface

Dynamic Run Screen Green indicates OK rundown.

Residual Run Screen Yellow indicates NOK rundown.

Adjusted Run Screen Adjusted Torque is NOK. Adjusted values are not evaluated for a high, OK or low. The background is always white.

User Friendly Interface

The Run Screen is designed to quickly select any of your pre-programmed applications. The Run Screen also provides separate displays for dynamic, residual, and adjusted torque. Additionally, the selected application automatically indicates which tool the operator should use, eliminating the possibility of running the correct application with the wrong tool.

Features

- Unlimited quantity of applications
- Program on the cart or at your desk
- All common fastening strategies
- Separate displays for dynamic, residual, and adjusted torque
- Tool diagnostics
- Statistics by application
- On-screen application selection
