

# Cleco® D Series Pulse Tools

Cooper Power Tools is pleased to introduce the next additions to the “D” Series pulse tool family. The new (5) tools cover torques ranging from 6 to 20 NM. All models offer significant weight reductions and speed improvements. The new models incorporate the same features as previously launched D Series pulse tools, such as three-chambered air motor, “pit-stop” pulse unit maintenance, torque adjustment at the back of the tool, relocated torque signal port, and reduced trigger pull. The D Series pulse tool family now covers torques ranging 6 to 80 NM.

Model Number	Drive Type	Torque Type		Free Speed RPM	Weight		Working CFM	Hose Size
